Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

Claims 1-12 are rejected under 35 U.S.C. 102(b) as being clearly anticipated by Venable (4996812).

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

Claims 13-14 are rejected under 35 U.S.C. 103(a) as being unpatentable over Venable. The specific properties of the membrane and the adhesive have been considered a matter of choice. One of ordinary skill in the art would have appreciated imparting these properties to the membrane to fulfill the intended purpose and function to the roof deck structure. See table within columns 3 and 4 of Venable.

Claims 15 is rejected under 35 U.S.C. 103(a) as being unpatentable over Venable in view of Beck (4498267). Venable lacks the roof structure with fiberglass reinforced gypsum board as taught by Beck. It would have been obvious to modify the roof deck of Venable to include the above materials in order to strengthen the structure.

Art Unit: 3635

Claims 19-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Venable in view of Yano et al (6077896). Venable lacks the adhesive includes a silyl-terminated polymer and the an oxyalkylene polymer having at least one reactive silyl group at each end of the polymer molecule as taught by Yano et al to provide a curable composition capable of providing rubber like mechanical properties.

Allowable Subject Matter

Claims 16-18 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.
